SECTION 18 QUARANTINE EXEMPTION FOR THE USE OF TILT® ON
SOYBEANS FOR CONTROL OF ASIAN RUST (*Phakopsora pachyrhizi*)
IN THE STATE OF NEW YORK

EPA FILE SYMBOL 04-NY-16

EXPIRATION DATE: NOVEMBER 10, 2007

TILT

FOR CONTROL OF ASIAN RUST ON SOYBEANS

Active Ingredient: Propiconazole: (CAS No. 60207-90-1) .................. 41.8%
Inert Ingredients: ................................................................. 58.2%
Total: ............................................................................. 100.0%

Contains 3.6 lb ai propiconazole per gallon.

KEEP OUT OF REACH OF CHILDREN

WARNING/AVISO

Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle.
(If you do not understand the label, find someone to explain it to you in detail.)

DIRECTIONS FOR USE

It is a violation of federal law to use this product in a manner inconsistent with its labeling.

FAILURE TO FOLLOW THE DIRECTIONS FOR USE AND PRECAUTIONS ON THIS LABEL
MAY RESULT IN POOR DISEASE CONTROL, CROP INJURY, OR ILLEGAL RESIDUES.

Follow all applicable directions, resistance management guidelines, restrictions, and
precautions, including statements pertaining to the worker protection standards, on the Tilt (EPA
Registration No. 100-617) label.

This label must be in the possession of the user at the time of pesticide application.
Soybeans

Apply 4-8 fl. oz./A of Tilt as a preventive foliar application (0 to <2% incidence in the field i.e. 2 of 100 plants infected) when conditions are favorable for disease development. A second application 14 days later may be needed if conditions persist. Scouting for the disease and/or being aware of the proximity of the disease via monitoring systems will aid in the proper timing to maximize the effectiveness of the fungicide application. Tilt is most effective when applied just prior to or at onset of disease. Tilt is not recommended if soybean rust has reached the mid-canopy. For best disease management, apply Tilt no later than soybean growth stage R6.

On certain varieties, Tilt applications may cause crinkled, smaller, and/or greener leaves. Plants displaying these characteristics have not shown reduced yields.

Coverage and penetration are important for best results. Tilt can be applied by either aerial or ground equipment. Use sufficient water volume to provide thorough and uniform plant coverage. When using aerial application, apply in a minimum of 5 gals./A. When using ground equipment, apply in a minimum of 10 gals./A. Use of an adjuvant may improve coverage and penetration.

Notes: To avoid possible illegal residues, (1) Do not apply more than 12 fl. oz./acre of Tilt per year. (2) Do not apply more than 0.34 lbs ai/A of propiconazole containing products per year. (3) Do not rotate to any crop within 105 days of Tilt application, unless the crop appears on the product label. (4) A maximum of 3 total applications using approved Section 18 products collectively are allowed under this soybean rust Section 18. Do not make more than 2 applications of propiconazole-containing products to soybeans per year.

Any adverse effects resulting from the use of Tilt under this emergency exemption must be immediately reported to the New York Department of Environmental Conservation.
