Cabrio EG Fungicide
EPA Reg. No. 7969-187

Directions for Use

- It is a violation of federal law to use this product in a manner inconsistent with its labeling.
- This labeling must be in the possession of the user at the time of pesticide application.
- Follow all applicable directions, restrictions, and precautions on the product label.
- Apply Cabrio EG Fungicide at 14 ounces per acre for suppression of white pine blister rust on currant and gooseberry. Begin applications prior to disease development and continue on a 7-14 day interval. Use the shorter interval when disease pressure is high. Applications may be made up to the day of harvest.
- To limit the potential for development of resistance, do not make more than 4 applications (56 ounces per acre) of Cabrio EG Fungicide or other Group 11 fungicides per season. Do not make more than two sequential applications of Cabrio EG Fungicide before alternating to a fungicide with a different mode of action.
- Do not enter the treated area within 24 hours of application.
