FIFRA SECTION 2(ee) RECOMMENDATION FOR DISTRIBUTION AND USE IN NEW YORK ONLY

PHOENIX SKYLARK™
EPA Reg. No. 70506-247

USE OF SKYLARK FOR THE PREVENTATIVE AND CURATIVE CONTROL OF FAIRY RING CAUSED BY BASIDIOMYCETE FUNGI ON GOLF COURSE TURFGRASS

This recommendation is made as permitted under FIFRA Section 2(ee) and has not been submitted to or approved by USEPA

DIRECTIONS FOR USE
It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Read and follow all applicable instructions, restrictions, and precautions on the EPA-approved label. This label and the federally registered label must be in the possession of the user at the time of pesticide application.

Preventative Treatment: Before fairy ring symptoms begin to appear in the Spring, apply Skylark as a foliar spray at the rate of 0.6 fl. oz./1,000 sq. ft. Apply when the soil temperature is 55- 65 °F., or when conditions are favorable for disease development. Skylark should be applied in a sufficient amount of water for thorough coverage. A volume of 66-132 gallons per acre (1.5 – 3.0 gallons per 1,000 sq. ft.) is recommended. Skylark should be watered into the crown and active root zone for best results. Make all applications after mowing and allow foliage to dry thoroughly before irrigation. For best results use spray mixture the same day it is prepared. Do not exceed a 28- day interval between applications.

Curative Treatment: When symptoms of fairy ring are present, apply Skylark as a foliar spray to those areas at the rate of 0.6 fl. oz./1,000 sq. ft. Skylark should be applied in a sufficient amount of water for thorough coverage. A volume of 66-132 gallons per acre (1.5 – 3.0 gallons per 1,000 sq. ft.) is recommended. Skylark should be watered into the crown and active root zone for best results. Make all applications after mowing and allow foliage to dry thoroughly before irrigation. For best results use spray mixture the same day it is prepared. Do not exceed a 28- day interval between applications.
