New York Department of Environmental Conservation
625 Broadway
Albany, New York 12233-7254

Attn: Cyndi Crowley

Date Issued: FEB 28 2006
Date Effective: June 1, 2006
Expiration Date: August 30, 2006
Report Due: February 28, 2007
File symbols: 06-NY-03

The Environmental Protection Agency hereby grants a specific exemption under the provisions of section 18 of the Federal Insecticide, Fungicide, and Rodenticide Act, as amended, to the New York State Department of Environmental Conservation (NYSDEC) for the use of fomesafen, formulated as Reflex Herbicide, to control broadleaf weeds in snap beans and dry beans. This specific exemption is subject to the following conditions and restrictions:

1. The New York State Department of Environmental Conservation is responsible for ensuring that all provisions of this exemption is met. It is also responsible for providing information in accordance with 40 CFR 166.32. This information must be submitted to EPA Headquarters and the appropriate EPA Regional Office.

2. The product, Reflex Herbicide, bearing either EPA Reg. No. 10182-83 (existing stocks of Zeneca product) or EPA Reg. No. 100-993 (Syngenta product), manufactured by Syngenta Crop Protection (formerly Zeneca AG Products), may be used. All applicable directions, restrictions, and precautions on the section 18 use directions submitted with your application as well as the EPA-registered product label must be followed.

3. A maximum of 14,250 acres of snap beans, and 11,000 acres of dry beans, may be treated under this exemption (total acreage of 25,250).
4. One application of fomesafen may be made, by ground application, at a rate of 0.32 to 1.25 pints of product (0.08 to 0.313 lb. active ingredient [a.i.]) per acre.

5. A 30-day pre-harvest interval must be observed.

6. The federal product label's regional application restriction for use on soybeans shall also apply to this use on snap beans. Therefore, fomesafen may not be applied on the same acreage more than once every two years.

7. The risk of non-target plant phytotoxicity potential from drift is a concern for endangered plant species in Suffolk County. In this county, a 50-foot buffer zone is required between the edge of treated fields and areas where endangered plants (Seabeach Amaranth and Sandplain Gerardia) are known to exist.

8. This product is toxic to birds and mammals. Drift and run-off may be hazardous to aquatic organisms in neighboring areas. Reflex may not be applied to sites where run-off is likely to occur to aquatic habitats.

9. Growers must be informed that in areas where soils are permeable and the water table is shallow, fomesafen may leach to groundwater.

10. Livestock may not be grazed in treated fields.

11. The EPA Headquarters and EPA Regional Office shall be immediately informed of any adverse effects or misuse resulting from the use of this pesticide in connection with these uses.

12. This specific exemption expires on August 30, 2006.

13. A report summarizing the results of these programs must be submitted by February 28, 2007, or prior to requesting this use again, to EPA Headquarters and the EPA Regional Office.

    To help mitigate concerns the Agency has for risk to wildlife from exposure to fomesafen, the lowest rate possible should be used that will still provide adequate control.

James Jones, Director
Office of Pesticide Programs
