FIFRA Section 2(ee) Recommendation

D-Terrence® (0.4% Deltamethrin Incorporated Polyethylene Screen) provides control of biting midges, including Culicoides spp., that may transmit Epizootic Hemorrhagic Disease (EHD) and Bluetongue virus.

DIRECTIONS FOR USE

D-Terrence® (0.4% Deltamethrin Incorporated Polyethylene Screen) provides control of biting midges, including Culicoides spp., that may transmit Epizootic Hemorrhagic Disease (EHD) and Bluetongue virus.

Wear waterproof, rubber or non-permeable protective gloves when applying screen.

For Control of Biting Midge (including Culicoides spp.):
Apply 2 rolls high (minimum of 6 feet (1.83m) tall) using nails or heavy duty staples on wooden structures and zip ties, plastic clips or hog rings on wire or metal structures.
Apply bottom roll first, ensuring that the bottom portion of the screen is as close to the ground as possible, preferably touching the ground. This will create a continuous barrier to protect animals from biting midges coming from breeding sites. Do not fold the screen at the bottom.
Apply second roll above bottom roll to cover minimum of 6 feet (1.83m) high continuously, making sure there are no gaps between the top and bottom sections.

Attach screen to outside of entire perimeter of enclosure. Apply screen prior to start of midge season or when pests appear for up to 1 year of protection. For best results, clean screen regularly as recommended.

The user must refer to the federally approved D-Terrence label and read and follow all applicable directions for use, restrictions, and precautions.

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling.

This recommendation must be in the possession of the user at the time of pesticide application.
