DIRECTIONS FOR USE

It is a violation of federal law to use this product in a manner inconsistent with its labeling.

DuPont™ LANNATE® LV can be applied at 1.5 pt/acre when slug populations reach locally determined economic thresholds. Consult the cooperative extension service, professional consultants or other qualified authorities to determine appropriate threshold levels for treatment in your area.

APPLICATION

Slugs primarily feed in the early evening, at night or in cool, early morning hours. Slugs are most active when weather conditions are moist and cool. It is recommended to make applications in the early evening through early morning when slugs are active and feeding.

LANNATE® LV should be applied at 5 to 7 day intervals to maintain control. Use sufficient water to obtain thorough, uniform coverage. Since LANNATE® LV is a fast acting contact insecticide, best results follow direct spraying of the target insect.

NOTE:

For Field Corn:
Do not apply LANNATE® LV within 21 days of harvest in field corn.
Do not apply more than 2.25 pounds of methomyl (7.5 pints of LANNATE® LV) per acre per growing season.
Do not make more than a total of 10 applications of LANNATE® LV per crop.

For Soybeans:
Do not apply LANNATE® LV within 14 days of harvest in soybeans.
Do not apply more than 1.35 pounds of methomyl (4.5 pints of LANNATE® LV) per acre per growing season.
Do not make more than a total of 3 applications of LANNATE® LV per crop.
