EMERGENCY EXEMPTION USE DIRECTIONS

EPA FILE SYMBOL 15-NY-01

STATE: New York
CHEMICAL: Potassium Salt of Hop Beta Acids (HOPGUARD™ II)
CROP/SITE: Honey Bees / All counties in the State of New York
PEST: Varroa mites (Varroa destructor)
EFFECTIVE: May 1, 2015 to December 31, 2015

PRECAUTIONARY STATEMENTS
Product may cause eye irritation – flood eyes with plenty of water if contact is made with eyes. Wearing protective eyewear when handling treated strips will reduce the potential for eye irritation. Avoid contact with skin, eyes or clothing. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum or smoking tobacco. Remove and wash contaminated clothing before reuse.

PERSONAL PROTECTIVE EQUIPMENT
Applicators must wear chemical-resistant gloves when handling treated strips.

DIRECTIONS FOR USE
Package - Strips must be applied at the rate of three half strips per 2 lb. or 3 lb. package of adult worker bees. Cut strips in half and attach three half strips to the top of package so that the strips are hanging within the package. Place bees in the package after the strips are attached. The bees should remain in contact with the strips for at least 48 hours.

Colony - Strips must be applied at the rate of one strip per five deep combs covered with bees in each brood super or for example two strips per ten frame brood super (chamber) when all the combs are covered with bees. Strips are to be placed only in the brood chamber (not in the honey super). Folded strips must be opened and hung over one of the center brood frame with one-half of the strip on each side of the frame. If using a second strip, apply it to an adjacent center frame about four inches away from the first strip. Strips must be placed hanging between frames, and within the colony cluster, and not laid on top of the frames. Leave the strips in the colony for 30 days. Retreat, as necessary, up to three times per year.

A maximum of three (3) applications per year (six (6) strips or approximately 24.0 grams of potassium salt of hop beta acids) per ten frame brood super (chamber) is allowed. This limit includes all applications to the package (if applicable) and to the colony. Application timing should be based on the levels of Varroa mites observed in the colony. Users may not take honey and wax from the brood chambers, only from the honey supers. For optimal results, apply HopGuard™ II when little to no brood is present in the colony (hive).

The use directions must be in the possession of the user at the time of application.

Any adverse effects resulting from the use of HopGuard™ II under this emergency exemption must be immediately reported to the New York State Department of Environmental Conservation, Division of Materials Management, Pesticide Product Registration, 625 Broadway, Albany, New York 12233-7257 (email: ppr@dec.ny.gov) (telephone: 518-402-8768).

RESISTANCE MANAGEMENT
Using this product in rotation with another approved miticide with a different mode of action will decrease the potential for Varroa mites to develop resistance. If the strip remains in the hive more than 30 days, remove.

Expiration Date: December 31, 2015
Report Due: June 30, 2016
File symbol: 15NY01

Attn: Jeanine Broughel

The Environmental Protection Agency hereby grants a specific exemption under the provisions of section 18 of the Federal Insecticide, Fungicide, and Rodenticide Act to the New York State Department of Environmental Conservation (NYSDEC) for the use of potassium salt of hop beta acids (HopGuard® II) in honeybee colonies to control varroa mites. This authorization is subject to the conditions and restrictions outlined below, as well as those specified in your request submitted to the EPA.

1) The NYSDEC is responsible for ensuring that all provisions of this specific exemption are met. It is also responsible for providing information in accordance with 40 Code of Federal Regulations (CFR) §166.32(a). Accordingly, EPA headquarters and the EPA Region 2 office shall be immediately informed of any adverse effects resulting from use of this chemical in connection with this exemption. In accordance with 40 CFR §166.32(b), a final report summarizing the results of this program must be submitted to EPA within 6 months following the expiration of this exemption or prior to requesting another specific exemption for this use.

2) The unregistered product, HopGuard® II (containing 16% potassium salt of hop beta acids), manufactured by BetaTec Hop Products, a subsidiary of John I. Haas, Inc., may be applied. All applicable use directions, restrictions, and precautions on the container label (amended label submitted to EPA by the registrant on January 22, 2015) as well as the section 18 use directions transmitted with your March 11, 2015 submission must be followed.

3) A maximum of 840,000 strips treated with potassium salt of hop beta acids may be used.
4) Bee Package: HopGuard® II strips may be applied at a rate of three half strips per 2 lb. to 3 lb. package of adult worker bees. Cut strips in half at the fold and attach three half strips to the top of package so that the strips are hanging within the package. Place bees in the package after the strips are attached. The bees should remain in contact with the strips for at least 48 hours.

5) Colony: HopGuard® II strips may be applied at the rate of one strip per five frames covered with bees in each brood chamber or two strips per ten frames covered with bees in the brood chamber. Strips are to be placed only in the brood chamber (not the honey super). Folded strips must be opened and hung over one of the center brood frames with one-half of the strip on each side of the frame as shown in the pictogram. If using a second strip, apply it to an adjacent center frame about four inches away from the first strip. Strips may be placed hanging between frame, and within the colony cluster, and not laid on top of the frames. Leave the strip(s) in the colony for 30 days. Honey bees tend to chew the cardboard strips; however, remove any remaining strips after 30 days. Strips are saturated with liquid and should be applied “as is.” Do not remove the liquid from the strip.

6) A maximum of three applications per year (6 strips) or approximately 24.0 grams of potassium salt of hop beta acids per ten frames of bees in the brood chamber is allowed. This limit includes all applications to the bee package (if applicable) and to the colony.

7) Users may not take honey and wax from the brood chambers, only from the honey supers. HopGuard is not temperature sensitive and can be applied in the brood chamber during honeyflow. Honey supers can remain in the colony during treatment. For optimal results, apply HopGuard® II when little or no brood is present in the hive.

8) Applicators must wear protective (chemical-resistant) gloves when handling treated strips.

9) In consideration of the use directions and available exposure data, the application program will not result in any food residues. Residue data suggest that quantifiable levels of potassium salt of hop beta acids are not expected to be present in edible honey when the product is used according to these section 18 use directions. Therefore, a tolerance will not be established to support this section 18 use pattern.

10) Honey and wax should not be harvested from the brood chambers. Users may only harvest honey and wax from the honey supers.

11) Unused strips should be stored in a cool, dark area. Any unused, unregistered product must either be returned to the manufacturer or distributor in unopened containers or disposed of in accordance with the Resource Conservation Recovery Act following the expiration of this emergency exemption.
This is the third year that the New York State Department of Environmental Conservation has requested an emergency exemption for this use under the FIFRA section 18 program. EPA is in the process of evaluating a FIFRA application for this use. Therefore, progress toward registration is adequate at this time.

In the event that an emergency exemption for this use is requested in the future, the Agency is making a preliminary determination that this program is eligible for the streamlined recertification application process under 40 CFR 166.20(b)(5).

Any future correspondence in connection with this authorization shall refer to file symbol 15NY01.

If you have any questions regarding this authorization, please contact Emergency Response Team member, Stacey Groce (703) 305-2505, groce.stacey@epa.gov or the Emergency Response Team Leader, Tawanda Maiginan at (703) 308-8050, maiginan.tawanda@epa.gov.
